
Earth Shoulder Construction and Earth Shoulder Finishing

Design Manual
Chapter 3
Cross Sections
Originally Issued: 07-27-21

Generally, Earth Shoulder Construction for pavements and bases relates to the earthwork above subgrade elevation, adjacent to the sides of pavement or base. It may involve minor or major reshaping and replacement of embankment material. Earth Shoulder Finishing relates to earthwork adjacent to curb and gutter. Refer to Section [2123](#) of the Standard Specifications for information regarding earth shoulder construction or finishing.

Earth Shoulder Construction and Earth Shoulder Finishing should not be bid for the same shoulders.

Bidding Earth Shoulder Construction

The Earth Shoulder Construction bid item includes material. Use [Tab 112-9](#).

Bidding Earth Shoulder Finishing

The Earth Shoulder Finishing bid item does not include the material; instead, the material should be included in excavation and/or topsoil bid items.
